EDUCATION

National University of Singapore (NUS)

Bachelor of Computing in Computer Science

Singapore

Aug. 2024 – May 2028

EXPERIENCE

Backend Software Engineer Intern

May. 2026 – Aug. 2026

Motional

Singapore

- Cut \$30,000/year in vendor spend as sole engineer by migrating Motional's 5 nuScenes evaluation challenges, used yearly by thousands of autonomous-driving researchers, from paid infrastructure onto open-source Hugging Face Spaces in 8 weeks.
- Accelerated deployment by 5x across all 5 nuScenes challenges by re-architecting them onto one shared codebase, replacing a brittle 5-branch parallel-merge release process.
- Engineered the platform for fair user access and long-term maintainability via OAuth-gated per-user annual submission quotas and a bounded process queue that fairly orders concurrent submissions under load.

Data Analyst Intern, Data Engineering & Backend

Jan. 2026 – Mar. 2026

Shopee

Singapore

- Engineered a cross-platform ETL workflow to aggregate TikTok Shop sales data into Shopee Hive environments via Google Drive API, improving data reliability and accelerating weekly stakeholder reporting across 8 regional markets by utilizing optimized SparkSQL queries.
- Enabled scalable visualization of key growth and marketing metrics for stakeholders by developing flexible, region-agnostic Python scripts that adapt seamlessly to 5 regional markets and various campaigns.

Data Science Intern, Backend & Cloud Systems

Sep. 2025 – Nov. 2025

ComfortDelGro

Singapore

- Enhanced vehicle valuation accuracy for ComfortDelGro Rent-A-Car's fleet by developing and deploying a large-scale web scraper to Google Cloud Run that extracted data from over 14,000 SGCarMart listings.
- Facilitated data-driven decision-making for internal stakeholders through the design of interactive Power BI dashboards fed by optimized SQL queries executed within BigQuery on Google Cloud Platform.

PROJECTS

TelegramWrapped | Python, Pandas, Telethon, OpenAI API, FastAPI, TailwindCSS, ShadCN

Jan. 2026

- Scalable Telegram analytics engine built using Python, Pandas, Telethon and OpenAI API featuring a multi-stage preprocessing pipeline that parses and normalizes JSON-exported chat histories into structured dataframes.
- Engineered a natural language processing (NLP) layer to perform frequency analysis, message distribution mapping, and user interaction modeling, optimizing data handling for large-scale group chat exports with over 20,000+ messages.

VerifAI | FastAPI, Streamlit, RAG, Sentence Transformers, ChromaDB, JSONL

Dec. 2025

- Refusal-aware Retrieval-Augmented Generation (RAG) system over proprietary documents using FastAPI, ChromaDB, and SentenceTransformers, with persistent vector storage, structural chunking, and hard-grounded generation enforced through citation-constrained prompting.
- Improved RAG system reliability by implementing cosine-similarity-based refusal logic, structured JSONL audit logging, and an evaluation pipeline, monitored via a real-time Streamlit dashboard.

Rizztaurant | Expo, TypeScript, Axios, CORS, Node.js, Express.js, Supabase, Google Maps API, Groq Cloud API

Aug. 2025

- Engineered a full-stack React Native mobile app with a Node.js/Express backend, enabling Tinder-style restaurant discovery that reduced average dining decision time by 40% in user testing, with personalized profiles powered by preference-based filtering.
- Enhanced user experience and retention by integrating a Groq LLM chatbot for intelligent recommendations and delivering advanced search, filtering, and responsive gesture-based UI.

TECHNICAL SKILLS

Languages: Python, Java, SQL, JavaScript, TypeScript, HTML/CSS, R

Libraries & Frameworks: React, Node.js, Express, FastAPI, Uvicorn, Expo, Tailwind CSS, Pandas, NumPy, Scikit-Learn, OpenCV, Temporal

AI & Machine Learning: PyTorch, TensorFlow, Hugging Face Transformers, LangChain, LangGraph, RAG

Databases & Big Data: PostgreSQL, MySQL, MongoDB, Firebase, Supabase, ChromaDB, Spark, Hadoop, Presto

Developer Tools: Amazon Web Services (AWS), Google Cloud Platform (GCP), Docker, GitHub, Tableau, Power BI, Hugging Face

Data Visualization: Streamlit, Matplotlib, Seaborn, Folium
